Summary

Full Stack Developer with around **4 years of experience** in SaaS environments, specializing in building **scalable web applications, microservices, and AI-powered solutions**. Experienced across the **full stack**, with front-end expertise in **React** and back-end proficiency in **Node.js**. Hands-on experience integrating **Generative AI** into production applications, including **RAG systems, agentic workflows, LLM APIs, vector search, and intelligent automation**. Proficient in leveraging the **Pega Low-Code Platform (Launchpad & Infinity)** and automated testing with **Jest and Playwright** to deliver secure, high-quality, user-centric solutions.

Work experience

Software Engineer -- Pegasystems (Hyderabad)

November 2024 – Present

- Developed and enhanced multiple microservices using **Kotlin, Java, Micronaut, and Spring Boot**, contributing to scalable and high-performance backend systems.
- Worked extensively on **Pega Low-Code Platform (Launchpad and Infinity)** to configure, customize, and extend enterprise workflows and UI.
- Implemented **unit tests using Jest** and **component/E2E tests using Playwright**, improving reliability and release quality.

Associate Software Engineer 2 -- Highradius (Hyderabad)

January 2024 – November 2024

- Developed a Chat-based Data Visualization & Support application using **React and OpenAI**
- Built and maintained **React-based frontend features** and reusable UI components for enterprise applications.
- Integrated **Retrieval augmented generation (RAG)** utility and real-time chat functionality with chatbot, reducing ticket volume by 30%

Associate Software Engineer 1 -- Highradius (Hyderabad)

July 2022 – January 2024

- Enhanced the **Apache Superset** data visualization app by adding new charts with the help of **Echarts library**, increasing the variety of visualization components by 20%.
- Implemented **RESTful APIs** using Flask, facilitating integration between front-end and back-end systems.
- Engineered dashboard export and import functionalities, streamlining the creation process. This optimization eliminated 90% of redundant steps in dashboard development
- Wrote **Jest test suites**, leading to a 20% decrease in software defects and improved overall code quality.

Intern -- Highradius (Bhubaneswar)

July 2021 – June 2022

- Contributed to 4+ web development projects using **HTML, CSS, JavaScript, TypeScript, React, HighCharts, Material-UI and NodeJs**
- Gained experience with version control (**git**) and **Agile** methodologies
- Assisted in UI development for an **AI-enabled B2B cloud application** in the financial sector

Education

- **Bachelors of Technology in Information Technology**,
Kalinga Institute of Industrial Technology, Bhubaneswar (2018 – 2022)

Skills

AI	Prompt Engineering, RAG, Agentic Flows, Vibe Coding
Frontend	HTML, CSS, JavaScript, TypeScript, React, Material UI, Ant Design
Backend	NodeJS, Python, Flask, Java, Kotlin, Micronaut., Springboot
Database	MySQL, MongoDB, DynamoDB
DevOps	Docker, Git, GitHub Actions, Jenkins, Google Cloud Program, AWS
Testing	Jest, Playwright

Projects

- [RETAILER360](#): From voice to GST invoices in seconds. Built with React and serverless AWS. Leverage browser web speech and Gemini API to translate voice to text to invoices.
- [OREZY](#): AI-powered QR-based digital menu platform built with React and serverless AWS, enabling instant menu digitization, interactive experiences, and real-time updates
- [SEND SMART \(Open source\)](#): A browser extension that enhances any text field with AI-powered rewriting, tone adjustment, grammar fixes, and length control.
- [KIRO REMOTE \(Open source\)](#): VS Code extension that lets you control Kiro chat sessions from your phone over WiFi or Cloudflare Tunnel.
- [WISEKIT](#): All-in-one developer toolkit web app with utilities like JSON formatting and webhook-driven sprint planning poker for real-time team collaboration, built using React and Node.js.
- [ACADMIK](#): LLM-driven quiz and note creator built with React and Flask, leveraging the llama3-8B model.
- [GIGGLE MATRIX](#): React app with Open-AI powered reverse image search using vector database.
- [CHAT2CHART](#): Web app for creating charts from text prompts using React, Flask, and OpenAI.
- [ED. ADDRESS](#): MERN stack web app for posting and finding tutoring services.
- [CSS_ARITH](#): TypeScript NPM library for arithmetic operations on CSS units

Achievements & Interests

- Recognized with multiple RTR Awards at @Pegasystems
- Led a front-end development team on a high-impact project, ensuring successful delivery @Highradius
- Multiple Employee of the Quarter awards @Highradius
- Enjoy portrait photography and digital art as hobbies
